DIRECT ACTIVITY

CONTRACTOR ACTIVITY

- With more than 50 years of experience the TELESPAZIO group has gained a solid and recognized heritage in the Space arena in particular at European level;
- Main achievements in Navigation, Telecommunications and Earth Observation domains;
- TELESPAZIO is ready to support the growth ambitions of the Polish industrial base by addressing financing sources at European level with cooperative projects (ESA, EU etc.);
- Areas of cooperation can be identified in the middle-stream and down-stream segment and cover among the other: feasibility studies; R&D; design, realization and test of specific Ground Segment equipment's; development of applications and EO specific data commercialization;
- Areas of cooperation still exist for COSMO-SkyMed in the civil domain where early services solutions can be tailored using the current Satellite resources to respond to short term Polish requirements paving the way for the fulfillment of medium-longer term needs (e.g emergency management or in the management of environmental resources);
- Additional subjects to be identified during the B2B session;

THANK YOU FOR YOUR ATTENTION
